Headline Adjustment Explanation

I made changes to the website headline to improve its overall appearance and clarity. I noticed that the letter "A" in the headline was slightly misaligned, which disrupted the visual flow. To address this, I enlarged the letter to create a more balanced and aesthetically pleasing look. This adjustment not only enhances the headline's visibility but also ensures that it aligns better with the overall design of the website.

Scroll Navigation Adjustment Explanation:

I updated the scroll navigation to enhance user experience. I repositioned it to a more prominent location, making it easier for users to find. Additionally, I enlarged the scroll button to improve visibility and accessibility. These changes aim to provide a more intuitive navigation experience, allowing users to effortlessly move through the website's sections.

Burger Menu Adjustment Explanation:

I decided to remove the burger menu from the website design to streamline the user experience on larger screens. This change aims to minimize hassle and clicks for users, allowing for more straightforward navigation. However, for mobile devices, I plan to reinstate the burger menu. This will provide an efficient way for users to access the navigation options without overcrowding the mobile layout. By implementing this approach, I ensure that the website remains user-friendly across different devices while enhancing overall usability.
